

## Thermore expands recycled insulation range

17/06/2020

Insulation brand Thermore has expanded its Ecodown Fibers line to offer a full collection of weights and thicknesses.

Ecodown Fibers 2.0 is a super-puffy blown fibre product suitable for wider baffle widths (up to 20cm) and Ecodown Fibers Light delivers an extremely soft yet ultra-light insulation.

The Ecodown range, which is made of 100% recycled fibres from PET bottles, was launched in 2018, with colours added the following year.

The Italian company opened a factory in Asia to meet demand and created an Ecodown Fibers Factory Audit System, which has certified 200 suppliers.
